Technical Skills

Languages
Python
Ruby
TypeScript
Java
C

Frameworks & Data
Rails
Django
FastAPI
React
PostgreSQL
DynamoDB
Redis

Infra & Testing
CI/CD
Docker
CloudFormation
Load/Chaos Testing
pytest
Jest

Observability
Prometheus
Grafana
CloudWatch
LogScale
OpenTelemetry

Education

BSc. Computer Science
German University in Cairo
2014 – 2019
GPA 3.9 / 4.0 · Highest Honors

Interests / Hobbies

Lego: Avid collector and builder. Always happy to discuss my latest builds, though be warned I can talk about them for hours.

3D Printing: I love the trial and error of rapid prototyping; there is a unique satisfaction in designing custom parts and finally seeing everything fit together like a glove.

Home Automation: Currently tinkering with a Raspberry Pi to automate my house, starting with a smart thermostat and now figuring out how to automate the sprinklers.

Professional Summary

Full-stack Senior Software Engineer with 7+ years of experience building developer tools, ML-driven services, and scalable products. Proven track record of taking complex technical initiatives from initial requirements through to production rollout. Recently focused on exploring Generative AI and LLM integrations through personal projects.

Work Experience

Software Engineer, Payouts Surfaces
Stripe | Mar 2026 – Present

Product engineer building merchant-facing dashboard flows and global payment integrations.

- Engineered a real-time fee-estimate service powering the payouts dashboard, providing immediate pricing transparency to merchants and driving a 12% increase in payout volume.
- Led the product integration of 6 global payment rails (including Apple Pay, RTP, and SEPA), unlocking $150M in new transaction volume.
- Served as Reliability Lead for the surfaces team, cutting post-deploy incidents by 35% via strict pre-launch checks and reducing MTTA by 60% through synthetic monitoring.

Software Engineer, Prime Video Web
Amazon | Nov 2022 – Mar 2026

Full-stack engineer on primevideo.com: feature redesigns and widely adopted developer tools.

- Engineered custom developer tooling (including Chrome extensions and UI inspectors) adopted across multiple teams, enhancing real-time diagnostics and cutting debug time by 40%.
- Drove the detail page redesign from initial product requirements through to a technical execution plan for 4 engineers, lifting user satisfaction by 21%.
- Led a complex Ads integration across 50+ services, collaborating across teams to de-risk the rollout with feature flags and increasing ad engagement by 35%.

Software Engineer, Payments Intelligence
GoCardless | Oct 2021 – Oct 2022

Built self-serve fraud prevention for merchants: dashboards and real-time ML scoring.

Software Engineer, External Integrations
shahry.app | Jul 2020 – Sep 2021

Founded the external integrations team, building POS payment flows for major merchant chains.

Software Engineer, Internal Tools
Informatica Middle East | Jun 2019 – Jun 2020

Built full-stack internal tools and client-facing web apps for enterprise workflows.

Projects

Coptic-to-Latin AI Transliteration App
Personal Project | Next.js · React · Tailwind CSS · Gemini API · Vercel

Engineered a full-stack, user-facing Next.js application that integrates the Google Gemini API for real-time phonetic text transliteration. Architected a secure, serverless backend to handle optimized LLM prompting, API rate limits, and custom inference timeouts for a seamless user experience.

Multi-Modal Vehicle Attack Detection
IEEE ICVES Publication | Python · TensorFlow

Authored research on autonomous vehicle security by developing a multimodal ML module that identifies discrepancies between image and LIDAR sensors. Engineered simulated attack scenarios using TensorFlow to detect real-time manipulation of vehicle camera feeds.
